4MP 25x Starlight IR WizMind Network Dual-PTZ Camera for Traffic

WizMind

Launched by Dahua Technology, Dahua WizMind is a full portfolio of solutions composed of project-oriented products including IPC, IVSS, NVR, PTZ, XVR, Thermal and software platform which adopts industry-leading deep learning algorithms. Focusing on customer's requirements, WizMind provides precise, reliable and comprehensive AI solutions for verticals.

System Overview

With its high-performance GPU chip, the device uses multiple deep learning algorithms to analyze data from complex scenes, and take snapshots of vehicles that are illegally parked. It has a dual-PTZ control system. The embedded panoramic and detail cameras can be rotated horizontally and vertically. The panoramic camera also links to the detail camera to perform tour, allowing you to configure multiple presets to increase coverage.

The device can be connected to 2 channel alarm inputs and 1 channel alarm output. Voice prompts are also broadcasted through the built-in speaker, providing warnings for drivers and allowing license plate numbers to be read out loud when a vehicle is illegally parked.

Functions

PFA Technology

PFA technology has introduced new methods of judgment that ensure the accuracy and predictability of the direction of subject distance adjustment. The result is a set of advanced focusing algorithms that ensure image clarity when zooming and that shorten focus time. This makes the camera highly advanced in its functions, substantially improving the quality of your experience.

- Dual PTZ system, dual vari-focal lens.
- 1/1.8" 4Megapixel CMOS.
- Powerful 25x optical zoom.
- Starlight technology.
- Max. 25/30 fps@4M.
- H.265 encoding.
- IP67.
- Illegal parking detection and checkpoint capture.

Smart H.265+

Smart H.265+ is the optimized implementation of the H.265 codec that uses a scene-adaptive encoding strategy, dynamic GOP, dynamic ROI, a flexible multi-frame reference structure and intelligent noise reduction to deliver high-quality videos without straining the network. Smart H.265+ technology outranks standard H.265 video compression, reducing bit rate and storage requirements by up to 70%.

Illegal Parking Capture

Empowered by deep learning algorithms, the device automatically detects and triggers alarms for illegal parking targets, and identifies vehicle attributes in designated areas. The camera supports zooming, capturing, and recognizing license plate numbers, vehicle types, vehicle colors, license plate colors and other motor vehicle attributes. The combination of long shots, close shots and detailed license plate snapshots form a complete chain of evidence on illegal behavior.

Dual-PTZ System

Both the panorama camera and detail camera of the Dual-PTZ system can be moved horizontally and vertically.

Scene

The device can be widely used in a variety of scenes, such as urban roads, elevated roads, and expressways, that require a wide monitoring range and that need to collect evidence for illegal parking.

Intelligence

Illegal Parking Capture	Capture range radius: 15 m–80 m (49.21 ft–262.47 ft) (panoramic linkage mode), 120 m (393.70 ft) (detail camera); support adaptive multi-scenario tour detection; supports voice prompts, reading license plate numbers out loud when a vehicle is illegally parked. 2–6 snapshots can be set, and the capture interval can be set between each capturing; snapshot type includes long-distance, medium-distance, close-distance, and plate feature; support vehicle type, color, logo, series, license plate, plate color and other attribute recognition; support panorama-detail linkage capture, and multi-scenario tour; supports panoramic fixed capture, while detail camera capturing illegal parking, and independent multi-scenario tour.
Checkpoint Capture	Detects events for up to 2 lanes. Detects wrong-way driving and traffic congestion. Recognizes motor vehicle attributes, including license plates, plate color, vehicle color, and vehicle type.
Intelligence Note	ANPR of illegally parked vehicle: Supports adaptively loading its corresponding license plate recognition algorithm according to the area selected; integrate overseas general recognition algorithms to support license plate recognition containing letters and numbers; integrate special license plate recognition algorithm in EU; integrate Singapore and Malaysia special license plate recognition algorithms; integrate special license plate recognition algorithms for UAE, Saudi Arabia, Morocco, Oman, Egypt, Iraq, and Jordan
